ADD.it

CREATIVE WORKS

Software that encourages good task tracking and time management to improve school performance in youth with executive function disorders, such as ADHD.

TECHNOLOGY SUMMARY

Over two million youth in America experience challenges associated with ADHD. Up to 32 percent of students diagnosed with ADHD fail to complete high school. Medication helps prevent hyperactivity and impulsivity but has little impact on academic achievement.

ADD.it assists students with time management, working memory, and executive function to improve their school performance. The software prompts students to record assignments at the end of each class following a pre-entered schedule. Parents and teachers verify students recorded information correctly. Students can schedule time to complete assignments and receive reminders for entered tasks. The software prioritizes tasks by due date and estimated time to complete. Students receive points for correctly entering, scheduling, and completing assignments as well as receiving a satisfactory grade. Students are then awarded points which can be redeemed for various purposes as determined by the parents/guardians.

FEATURES AND BENEFITS

- Improves school performance for students with ADHD.
- Tracks tasks and assignments from introduction to completion.
- Assists with time management.
- Incorporates rewards for desired behavior.
- Facilitates communication between youth, parents, and teachers.
